C.Q.R.iT® LOCKERS

pronounced 'Secure It'

DEPOSIT LOCKERS
C.Q.R.iT Lockers are ideal for mobile phones, iPads, cameras, luggage and "C" Class briefcases. The owner of the item can be sure their expensive equipment is secure whilst they access other areas.

WITHDRAWAL LOCKERS
C.Q.R.iT Lockers allow you to store and restrict access to expensive items. Only authorised users can open the lockers, but they are accountable as every transaction is logged and recorded. The Security Manager can finally secure and control expensive electronic equipment and bulky items. Items that you may want to secure include 2-way radios, computers, phones, briefcases, cameras, scientific equipment, documents and any high-value asset that needs to be controlled.

HOW THEY WORK:
C.Q.R.iT Lockers can be programmed across your computer network using the included KeySecure software. Users can be granted or denied access to certain lockers at certain times giving you ultimate control and peace of mind. For example, you can program a one-time use of each compartment, or you can permanently assign a locker compartment to a specific user.

The locker can be programmed to allow access for a set period of time when a person arrives or it can be made available during specified hours. If the locker is being used to house electronic equipment, each compartment can be optionally fitted with a power outlet to facilitate charging. Access is gained via the Control Unit using an allocated PIN, swipe card, finger print or even facial recognition.

All lockers have a back-up battery and a mechanical key override for emergency access.

WHO SHOULD CONSIDER C.Q.R.iT LOCKERS:
The C.Q.R.iT Lockers are designed for high-level security departments such as government or defence sites, airports, casinos, detention centres, correctional facilities, schools and universities.
